NAME

      mmrpviz – Mobile Mesh Visualization Tool

SYNOPSIS

      mmrpviz -p <mmrp port>

DESCRIPTION

      mmrpviz provides a graphical display of the Mobile Mesh network topology. It is actually just a simple Perl/Tk script that displays the contents of a GIF file and redisplays the GIF whenever it changes. The GIF file is created using the **mmtodot** tool.

OPTIONS

      mmrpviz recognizes the following command line switches:

      -p <mmrp port>

            where <mmrp port> is the UDP port number used by an active copy of the **mmrp** program. This port number enables mmrpviz to associate itself with the appropriate copy of **mmrp** when more than one copy is executing simultaneously.

SEE ALSO

      mmrp(8), mmtodot(8),

AUTHOR

      This program and documentation was written by Kevin H. Grace of The MITRE Corporation <kgrace@mitre.org>. Credit is also given to Mike Butler who developed some of the support classes and lent his keen insight.
